EDUCATION

University of Washington

B.S. Computer Science, Paul G. Allen School of Computer Science & Engineering

Seattle, WA

Expected 2029

TECHNICAL SKILLS

Languages: Python, Java, JavaScript, TypeScript

Frameworks & Libraries: React, Next.js, Flask, FastAPI, PyTorch, discord.py, BeautifulSoup

Databases & Tools: PostgreSQL, MongoDB, Supabase, Git, Railway, Vercel, Mapbox

EXPERIENCE

Technology Officer

September 2025 – Present

GEN1

Seattle, WA

- Built and maintained the club website in JavaScript, supporting **50+ first-generation CS students** at UW Allen School
- Built a financial tracking and reporting system to manage club budgets, reducing report generation time from **2+ hours to under 10 minutes**

Software Engineer Intern

June 2025 – September 2025

AFC Sushi

Seattle, WA

- Automated supply tracking with spreadsheets and Python scripts, increasing efficiency of weekly inventory runs by **35%**
- Developed internal scheduling tools in Python to streamline shift management for **10 employees**, eliminating 10+ scheduling conflicts per week
- Built a trend tracker that analyzed sales data and identified customer demand patterns, directly informing the addition and removal of **10 menu items**

PROJECTS

HumanZero - AISC Hackathon | *Python, JavaScript, PyTorch, Flask, React, Git*

March 2026 - March 2026

- Built a CLIP-based full-stack AI detection platform identifying AI-generated content with **98 percent** image accuracy using deep learning models
- Implemented **two PyTorch inference pipelines** exposed via **Flask REST API**, enabling real-time media uploads and automated authenticity assessments
- Developed a **JavaScript frontend** integrated with **backend APIs** delivering instant AI-generated content predictions to end users

Discord Internship Opportunities Bot | *Python, discord.py, BeautifulSoup, Railway*

March 2026 – Present

- Engineered a Python Discord bot aggregating real-time internship listings for **50+ members**, fully automating manual job search workflows
- Built a multi-channel location filtering system routing **2,000+ listings** to targeted channels, cutting irrelevant listing noise by **80 percent**
- Centralized sourcing across **5 job boards** into a single automated feed, reducing internship discovery time from **hours to minutes**

Coralyst - UC Davis Hackathon | *Python, FastAPI, MongoDB Atlas, LLaMA RAG,*

May 2026 - May 2026

- Engineered a **FastAPI backend** connecting MongoDB Atlas sensor storage, a RAG connector, and a fine-tuned LLaMA model on Vultr Cloud CPU to deliver real-time coral bleaching predictions
- Sourced and curated the NOAA coral reef dataset used to fine-tune a LLaMA model on Google Colab, achieving **85-90% bleaching prediction accuracy**
- Built a frontend with live graph data updates and an **RAG-powered chatbot** delivering instant predictions and knowledge-base responses to end users
